Re: Opposition to Federal Preemption of State AI Laws within the NDAA

Dear Leaders, Mr. Speaker, Chairmen, and Ranking Members,

We, the undersigned organizations committed to protecting civil rights, promoting consumer protections, and fostering responsible innovation, write to express our strong opposition to adding a provision to the NDAA that would preempt state and local laws governing artificial intelligence (AI).

As AI systems increasingly shape critical aspects of Americans' lives—including hiring, housing, healthcare, policing, and financial services—states have taken important steps to protect their residents from the risks posed by unregulated or inadequately governed AI technologies. As we have learned during other periods of rapid technological advancement, like the industrial revolution and the creation of the automobile, protecting people from being harmed by new technologies, including by holding companies accountable when they cause harm, ultimately spurs innovation and adoption of new technologies. In other words, we will only reap the benefits of AI if people have a reason to trust it.

This is yet another egregious attempt at sneakily incorporating AI preemption in a legislative vehicle when the American people have rejected preemption as a concept, most famously during a historic 99-1 AI Moratorium defeat.¹ Americans have routinely supported measures to hold AI companies accountable for the harms they are responsible for. Polling shows 80 percent of Americans want to maintain rules for AI and data security.²

However if passed, preemption would mean that even if a company deliberately designs an algorithm that causes foreseeable harm — regardless of how intentional or egregious the misconduct or how devastating the consequences — the company making or using that bad tech would be unaccountable to lawmakers and the public. In many cases, it would make it

¹ <https://www.pbs.org/newshour/politics/senate-pulls-ai-regulatory-ban-from-gop-bill-after-complaints-from-states>

² <https://news.gallup.com/poll/694685/americans-prioritize-safety-data-security.aspx>

virtually impossible to achieve a level of transparency into the AI system necessary for state regulators to even enforce laws of general applicability, such as tort or antidiscrimination law.

Despite how little is publicly known about how many AI systems work, harms from those systems are already well-documented, and states are acting to mitigate those harms. Many state laws are designed to prevent harms like algorithmic discrimination and to ensure recourse when automated systems harm individuals. For example, there are many documented cases of AI having highly sexualized conversations with minors³ and even encouraging minors to commit harm to themselves and others⁴; AI programs making healthcare decisions that have led to adverse and biased outcomes;⁵ and AI enabling thousands of women and girls to be victimized by nonconsensual deepfakes.⁶

Congress's inability to enact comprehensive legislation enshrining AI protections leaves millions of Americans more vulnerable to existing threats described above such as discrimination and all of us exposed to the unpredictable safety risks posed by this nascent industry. Fortunately, states across the nation, on a bipartisan basis, have pioneered thoughtful frameworks that promote transparency, accountability, safety, and fairness in AI deployment. Two-thirds of states, including Kentucky, Ohio, North Dakota and New Jersey have considered common-sense laws that address gaps in federal protections and are crafted in close dialogue with impacted communities. Those states are filling the need for substantive policy debate over how to safely advance development of this technology.

Federal preemption would invalidate key state laws that protect against “high impact” AI, which is contrary to the Trump administration's executive memo⁷ aiming to protect the public from harms in federal agencies use of AI in employment, lending, education, and beyond. Protections for civil rights and children's privacy, transparency in consumer-facing chatbots to prevent fraud, and other safeguards would be invalidated, even those that are uncontroversial. The resulting unfettered abuses of AI or automated decision systems could run the gamut from pocketbook harms to working families like decisions on rental prices, to serious violations of ordinary Americans' civil rights, and even to large-scale threats like aiding in cyber attacks on critical infrastructure or the production of biological weapons.

No person, no matter their politics, wants to live in a world where AI makes life-or-death decisions without accountability. This is underscored by the fact that state attorneys general, from all 50 states, have warned Congress⁸ that AI has been used to harm children including through child sexual abuse material. Further, many state attorneys general have also shown interest in pursuing enforcement actions based on the laws in their own states, which would be

barred by this preemption language. This includes state attorneys general from Alabama,⁹ California,¹⁰ New Jersey,¹¹ Oregon,¹² Massachusetts,¹³ Texas,¹⁴ and Pennsylvania¹⁵ among others.

You must reject this sweeping proposal. Americans deserve both meaningful federal protections and the ability of their states to lead in advancing safety, fairness, and accountability when AI systems cause harm.

Sincerely,
